CoverFlow Integration Install

In order to install the "**phpFox CoverFlow Integration**", please follow the steps below:

- Open the file: "config.inc.php" contained in the folder: "include"
  (in this mod not your phpFox)

  - If you are using Short URL's, please replace 0 with 1 for the variable "$shortURL"
  - If you are using phpFox in a Subdirectory on your Webserver, please put this (with a trailing slash) in for the variable "$subDir". (Example: $subDir='development/' with the trailing slash)

The integration Script takes the following parameters:

1. **mode →**
   photo (for recent photos)
   video (for recent videos)
   profile (members)
   logins (recent logins)
2. **limit →**
   number of items shown in the CoverFlow

- Upload the whole folder **"ImageFlow"** to the **root directory of your phpFox Installation**

- **Open your Admin Control Panel and go to:**
  → CMS
  → Blocks
  → Add New Block

After you have copied each of the following code blocks, please replace: "YourDomain.com" with your actual domain.

Recent Photos

- **“Block Details”**
  Select the following options:

  Product → phpFox
  Module → Core
  Title → Whatever you want
